

Tutorial No. 05

**Title: Flexible Content Layout and Responsive
Webpage**

Batch: B2 Roll No.: 1914078**Tutorial No.: 5**

Aim: To design flexible content layout and responsive webpages

Resources needed: Notepad++, Web Browser

Theory:

Responsive Web Design-The goal of a responsive layout is to function well on every single device. Regardless of screen size or resolution, your responsive designs should always be useable.

Focus on usability for every single aspect of your site. This may be easier starting with mobile-first because you're designing for limited features, then moving up to desktop which supports a wider screen size.

Flex Layout Model- CSS3 flexible Box, or flexbox is a new layout model for creating the more flexible user interface design with multiple rows and columns without using the percentage or fixed length values. The CSS3 flex layout model provides a simple and powerful mechanism for handling the distributing of space and alignment of content automatically through stylesheet without interfering the actual markup.

Activity

Add grid layout, flex container and responsive property to the webpages

Results: (Program printout with output):

Code:

HTML CODE:

```
<!DOCTYPE html>
<html lang="en">

About Us

A package tour, package vacation, or package holiday comprises transport and accommodation advertised and sold together by a vendor known as a tour operator. Other services may be provided such a rental car, activities or outings during the holiday. Transport can be via automobile, buses, charter airline, and may also include travel between areas as part of the holiday. Package holidays are a form of product bundling. Package holidays are organised by a tour operator and sold to a consumer by a travel agent. Some travel agents are employees of tour operators, others are independent.

Group Tours

Travel Package for an assembly of travellers with common itenary, travel date and transportation.

Speciality Tours

This is a kind of adventure tourism to explore new cultures and societies.

Cruises

Travel in a Cruise ship and explore magestic cities and ports!

Resize the browser window to see how the content respond to the resizing.

Outcomes:

CO-2: Create Web pages using HTML 5 and CSS .

Conclusion: (Conclusion to be based on the outcomes achieved):

Through this experiment we learnt to design flexible content layout and responsive Webpages using CSS-3. All the features such as CSS Viewport and Media queries ,CSS Flexbox and CSS grid were implemented and all the attributes given in W3Schools were used in performing the experiment.
